Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars. is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.

In the past fifteen years, most countries of Central and Eastern Europe and the Commonwealth of Independent States have shifted from predominantly collective to more individualized agriculture. These years also have witnessed the largest fall in agricultural production, yields, and rural employment on record, while the deterioration and dissolution of collective and state farms have been accompanied by a significant drop in rural public services. Land Reform and Farm Restructuring provides a structured and comparative review of important aspects of land reform and documents important differences in policies between countries to examine why the reforms have not yet lived up to their potential. It is based on data from farm and household surveys and interviews conducted in 2003 and 2004. Case studies from Bulgaria, Moldova, Azerbaijan, and Kazakhstan - countries that have had particular difficulties in land reform, farm restructuring, farm performance, or rural poverty - each highlight a central conundrum about land reform and farm restructuring. The paper concludes with some implications for policy.

Here is the book that exposed the Daimler-Chrysler "merger of equals" as a bold German takeover of an industrial icon. Taken for a Ride reveals the shock waves felt around the world when Daimler-Benz bought Chrysler for \$36 billion in 1998. In a gripping narrative, Bill Vlasic and Bradley A. Stertz go behind the scenes of the defining corporate drama of the decade -- and in a new epilogue chart its chaotic aftermath.
