This volume constitutes the refereed proceedings of the 19th International Symposium on Graph Drawing, GD 2010, held in Eindhoven, The Netherlands, during September 2011. The 34 revised full papers presented together with 3 revised short and 6 poster papers were carefully reviewed and selected from 88 submissions. Furthermore, the proceedings contain the abstracts of two invited talks and to commemorate Kozo Sugiyama and his pioneering research in graph drawing, the proceedings include an obituary. A unique and fun part of the symposium is the Graph Drawing Contest, which is part of the Graph Drawing Challenge. This year was the 18th edition. A report on the contest is included at the end of the proceedings.

The proceedings to "Serious Games on the Move 08" will contain all results of this conference on game

software applications that are designed to do more than entertain. The focus of the contents lie on research results and developments in the rapidly moving field of serious games and their potential use in education and training as well as in the presentation of several showcases. The proceedings will address the following three topics: 1. Designing serious games: This topic will include innovations in the design of serious games, in particular games for use in education and training environments. 2. Embedding serious games and virtual worlds within learning programmes: Original research papers and case studies that investigate the potential for integration of serious games and virtual worlds within programmes of education and training will be the core content of this theme. 3. Tools, technologies and platforms: Under this topic the proceedings will provide information relating to serious games technologies.

The book derives from the experiences of the authors as lecturers and tutors at different international summer schools on reality-based surveying and 3D modelling in the field of archaeology and cultural heritage. The book is organized in three main sections. The first part aims to introduce and discuss the contribution of geomatic techniques in archaeology and more generally in cultural heritage with particular attentions to the 3D domain. The second part is focused on the main areas involved in the implementation of 3D surveys (aerial and terrestrial LiDAR, photogrammetry, remote sensing), 3D documentations, GIS and 3D interpretations (virtual and cyber archaeology). The last section collects some relevant case studies showing the extraordinary contribution that geomatic techniques can give to archaeological research and cultural heritage at different scales of detail: object, site, landscape.

This poetry book is a compilation of 21 poems that I wrote while in college.

This is a comprehensive survey of binocular vision, with an emphasis on its role in the perception of a three-dimensional world. The central theme is biological vision. Machine vision and computational models are discussed where they contribute to an understanding of living systems.

During the past 25 years, the field of space and motion perception has rapidly advanced. Once thought to be distinct perceptual modes, space and motion are now thought to be closely linked. Perception of Space andMotion provides a comprehensive review of perception and vision research literature, including new developments in the use of sound and touch in perceiving space and motion. Other topics include the perception of structure from motion, spatial layout,and information obtained in static and dynamic stimulation. Spatial layout Structure from motion Information on static and dynamic stimulation (visual, acoustic, and haptic)

This brilliantly argued, first-hand account of the authors major discoveries at the renowned archaeological site Çatalhöyu?k in Turkey, described by Professor Colin Renfrew as one of the most ambitious excavation projects currently in progress, is now available in paperback. A tour de force of archaeological writing, it offers many insights into past lives and momentous events, and is superbly illustrated with images of the art, the artifacts and the excavations at this world-famous dig. It will be a must-read for archaeologists and historians everywhere.

Finally, a Photoshop book that is written expressly for professional photographers and hi-end serious

amateurs that doesn't talk about F-stops, exposures, and how to frame a shot (you know all that stuff already--if you don't¿I hate to say it, but this isn't for you). This new book, from Photoshop User magazine editor and bestselling author Scott Kelby, starts at the moment your digital camera photos come into Photoshop, and he shows you the Photoshop pros techniques for managing, correcting, retouching and outputting your photos to knock your client's socks off, and turn you into a Photoshop production wizard. This book is absolutely ideal for traditional photographers who are making the jump to digital photography, and Scott's casual, step-by-step, plain-English style makes even the most complex Photoshop techniques seem so easy and accessible. It's the type of book that makes you smile and think "Ahhhh, so that's how they do it" and then immediately you realize "Hey, I can do this!" The entire book is graphically rich, in full color cover-to-cover, and best of all it's packed with real-world project-based tutorials that will take you through the process of sizing your images with the proper resolution (and the secret to doing so without losing image quality), how to deal with High ISO noise, blue channel noise, and other common plagues introduced by digital cameras; you'll learn how the pros color correct their photos for output on everything from inkjet printers to printing presses, and the secrets to getting perfect fleshtones no matter where it¿s output. You'll learn the sharpening techniques today's top digital photographers use, and how the leading retoucher's perform "digital plastic surgery" in Photoshop, plus professional facial retouching techniques using Photoshop 7.0's amazing new tools. Plus, you'll also learn how to manage your photos, "digital dodging and burning" tricks, dealing with common problems, making client presentations within Photoshop and on the Web, and the inside tips on how to work faster and more efficiently than you ever thought possible. If you're serious about digital photography and Photoshop, this is book you've been waiting for.

Recipient of the Jo Anne Stolaroff Cotsen Prize Occupied from around 7500 BC to 5700 BC, the large Neolithic and Chalcolithic settlement of Catalhoyuk in Anatolia is composed entirely of domestic buildings; no public buildings have been identified. First excavated in the early 1960s, the site was left untouched until 1993. During the summers of 1997-2003 a team from the University of California at Berkeley (the BACH team) excavated an area at the northern end of the East Mound of Catalhoyuk. The houses there date predominantly to the late Aceramic and early Ceramic Neolithic, around 7000 BC. Last House on the Hill is the final report of the BACH excavations. This volume comprises both interpretive chapters and empirical data from the excavations and their materials. The research of the BACH team focuses on the lives and life histories of houses and people, the use of digital technologies in documenting and sharing the archaeological process, the senses of place, and the nature of cultural heritage and our public responsibilities.
