foundational topic needed for application to other important areas including biomechanics, musculoskeletal injuries, rehabilitation, strength and conditioning, and more. The text uses 18 chapters divided across five sections to cover all the material. Section I has four chapters that present the anatomy and physiology concepts

most relevant to  
kinesiology such as body  
orientation; terminology;  
and the skeletal,  
muscular, and nervous  
organ systems. Section II  
is divided into three  
chapters on the bones  
and their landmarks. The  
final three sections  
contain the muscle  
chapters: One section for  
the lower extremities, one  
for the axial skeleton, and

one for the upper extremities. The chapters are divided by regions (i.e. ankle, knee, shoulder, etc.).

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this

course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read

and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences
