Computer Architecture Computer Organization: 1. Architecture describes what the computer does. Organization describes how it does it. 2. Computer Architecture deals with functional behavior of computer system. Computer Organization deals with structural relationship. 3. In above figure, its clear that it deals with high-level design issue.

Differences between Computer Architecture and Computer ...

In computer engineering, computer architecture is a set of rules and methods that describe the functionality, organization, and implementation of computer systems. Some definitions of architecture define it as describing the capabilities and programming model of a computer but not a particular implementation. In other definitions computer architecture involves instruction set architecture design, microarchitecture design, logic design, and implementation.
