Personal computing is changing from an old world of local services provided by local devices to a new world of remote Web-based services provided by cloud computing-based data centres. This book explores in detail what might be required to make a comprehensive move to this exciting new world and the many benefits that move could bring.

Wireless power transmission is the final step in making mobile smartphones truly mobile by substituting the charging cords that restrain these devices at the moment. Introduced by Nikola Tesla towards the end of the 19th century, this technology is envisioned to solve the energy crisis in future by transmitting solar energy harvested in the outer space. The technology has the potential to revolutionize the automobile and aviation industry by allowing wireless charging of vehicles on the go. This technology can't be neglected anymore, owing to the tremendous impact that it can impart by redefining industries (Energy, Automobile, Consumer electronics, and many more). In this report, we study the technological landscape of this technology from the perspective of Intellectual Property (Patents).

The use of bibliometrics for the analysis of technology management is on the rise in our increasingly

technological societies. Many are using these tools to document or record the rise of various technologies, making it necessary to take stock of the value and application of scientometric methods and their measures. Innovation Discovery shows the current state of play within the field of management of technology, and discusses how we can use networks to explore, understand and generate theory around the innovation process. It looks at the different streams of analysis used to understand bibliometric data, and presents alternative and novel ways of applying these techniques. Written as a comprehensive review of approaches by leading researchers in the field, this book is suitable for graduate and post-graduate students and researches looking to expand their knowledge and embark on further investigations in technology management.

It's no secret that some of the most successful companies, such as 3M, Procter & Gamble, Microsoft, and Mercedes-Benz, are also known for their new product development strategies. Creating and Marketing New Products and Services teaches the key business and marketing principles needed to successfully design and launch new products and services in today's global market. It begins by providing the foundation required to understand the role of new product development in the innovating organization. The book emphasizes marketing research techniques that can help firms identify the voice of the customer and incorporate these findings into their new product development process. It addresses the role of sustainability in innovation, open innovation strategies, and international co-development efforts of new products and services. Explaining how to manage the development and marketing of new products and services, this book will teach you how to: Select a new product strategy that matches the needs of your organization Set up a disciplined process for new product development Define target market opportunities and search out high potential ideas Understand customer needs, structure them, and prioritize the needs to clearly define the benefits and values that your product will deliver Integrate marketing, engineering, R&D, and production resources to design a high-quality product that satisfies customer needs and delivers value Forecast sales before market launch based on testing of the product and the marketing plan The concepts

discussed in the book can help to boost innovation and improve the performance of any type of organization. Some of the concepts presented are generic and others must be modified for each application. Together, they can lead to greater profitability and reduced risk in the new product development activities within your organization.

If you read technology news, you'll notice it's not just a story of amazing new product introductions, or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I've collected what happened in the industry in 2013 and make predictions on what will and won't happen in 2014. You can read what did happen in the mobile technology in 2013. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one

else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business, who's up, who's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones and choose the few to share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They

will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2014 for the mobile technology industry, breakdowns of marketshare figures on the horse race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2013 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is figuring into our lives. I've divided the news into the subjects it covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about one topic at a time in the earlier chapters. Table of Contents Preface Introduction Chapter 1: 2014 Predictions Chapter 2: Mobile Marketshare Chapter 3: Apple Chapter 4: Samsung Chapter 5: Google Chapter 6: Microsoft Chapter 7: Nokia Chapter 8: Blackberry Chapter 9: Amazon Chapter 10: Social Media Chapter 11: Yahoo Chapter 12: Carriers Chapter 13: 2013 Predictions Chapter 14: Essays Appendix
