Use Virtual ChemLab to do almost any lab or procedure that can be performed in a real lab. Choose from 30 exciting pre-built labs or design your own--in less time, and with no clean-up, safety, or equipment issues. Find realistic lab environments for Inorganic Chemistry, Calorimetry, Titrations, Gases, and Quantum Chemistry.

The Laboratory Manual for General, Organic, and Biological Chemistry , third edition, by Karen C. Timberlake contains 35 experiments related to the content of general, organic, and biological chemistry courses, as well as basic/preparatory chemistry courses. The labs included give students an opportunity to go beyond the lectures and words in the textbook to experience the scientific process from which conclusions and theories are drawn.

The last decade has seen a huge interest in green organic chemistry, particularly as chemical educators look to "green" their undergraduate curricula. Detailing published laboratory experiments and proven case studies, this book discusses concrete examples of green organic chemistry teaching approaches from both lecture/seminar and practical perspe

Chemical Exposure Predictions discusses the challenges of analyzing biological and geological cycles of various chemical substances and evaluating their potential exposure "from the cradle to the grave." The book examines physico-chemical properties, the possibilities for predicting degradation, and partition coefficients and kinetics of distribution phenomena. It also covers how to validate predictions and presents examples of hazard assessment. Chemical Exposure Predictions will be an indispensable reference for environmental chemists, environmental toxicologists, ecotoxicologists, occupational health specialists, regulatory personnel, and environmental consultants.
