project managers do not have a set of comprehensive rules for management processes or even a management system. They rely at times on individual experience for such things as scheduling. But there is no set of comprehensive methods that combines the essence of project management. This type of construction project management could perhaps satisfy the needs of regional competition in the past, but cannot respond to the present demands of global competition. Now major construction projects often involve bidding invitations to international contractors. Only those with a perfect construction project management model can stand out amongst the many international competitors. A construction project may involve enormous investment, high social visibility and often public safety as well. Less than stringent construction project management can result in schedule delays, cost overruns, poor quality and even danger to the public. Construction projects invariably require collaboration between several contractors. The absence of a comprehensive construction project management framework to integrate everyone's thinking and behavioral modes can easily turn the construction process into one for resolving communication and coordination problems, rather than improving team efficiency and dynamism. The body of knowledge summarizes the construction project management steps and implementation techniques into construction project management methods. These methods will steer the thinking logic of construction project management personnel to be active and helpful and this will have a positive affect on the enforcement and execution of every step.

A Guide to the Project Management Body of Knowledge (PMBOK® Guide) provides generalized project management guidance applicable to most projects most of the time. In order to apply this generalized guidance to construction projects, the Project Management Institute has developed the Construction Extension to the PMBOK® Guide. This Construction Extension provides construction-specific guidance for the project management practitioner for each of the PMBOK® Guide Knowledge Areas, as well as guidance in these additional areas not found in the PMBOK® Guide:

- All project resources, rather than just human resources
- Project health, safety, security, and environmental management
- Project financial management, in addition to cost
- Management of claims in construction

This edition of the Construction Extension also follows a new structure, discussing the principles in each of the Knowledge Areas rather than discussing the individual processes. This approach broadens the applicability of the Construction Extension by increasing the focus on the “ what ” and “ why ” of construction project management. This Construction Extension also includes discussion of emerging
