Academic Search Engines: intends to run through the current panorama of the academic search engines through a quantitative approach that analyses the reliability and consistence of these services. The objective is to describe the main characteristics of these engines, to highlight their advantages and drawbacks, and to discuss the implications of these new products in the future of scientific communication and their impact on the research measurement and evaluation. In short, Academic Search Engines presents a summary view of the new challenges that the Web set to the scientific activity through the most novel and innovative searching services available on the Web. This is the first approach to analyze search engines exclusively addressed to the research community in an integrative handbook. The novelty, expectation and usefulness of many of these services justify their analysis. This book is not merely a description of the web functionalities of these services; it is a scientific review of the most outstanding characteristics of each platform, discussing their significance to the scholarly communication and research evaluation. This book introduces an original methodology based on a quantitative analysis of the covered data through the extensive use of crawlers and harvesters which allow going in depth into how these engines are working. Beside of this, a detailed descriptive review of their functionalities and a critical discussion about their use for scientific community is displayed.

Provides an understanding of Web search engines from the unique perspective of Library and Information Science. This book explores a range of topics including retrieval effectiveness, user satisfaction, the evaluation of search interfaces, the impact of search on society, and the influence of search engine optimization (SEO) on results quality.

This book will be vital reading for anyone doing research, since using the web to find high quality information is a key research skill. It introduces beginners and experts alike to the most effective techniques for searching the web, assessing and organising information and using it in a range of scenarios from undergraduate essays and projects to PhD research. Nigel Ford shows how using the web poses opportunities and challenges that impact on student research at every level, and he explains the skills needed to navigate the web and use it effectively to produce high quality work. Ford connects online skills to the research process. He helps readers to understand research questions and how to answer them by constructing arguments and presenting evidence in ways that will enhance their impact and credibility. The book includes clear and helpful coverage of beginner and advanced search tools and techniques, as well as the processes of: @critically evaluating online information @creating and presenting evidence-based arguments @organizing, storing and sharing information @referencing, copyright and plagiarism. As well as providing all the basic techniques students need to find high quality information on the web, this book will help readers use this information effectively in their own research. Nigel Ford is Professor in the University of Sheffield’s Information School.

. The report presents data from a survey of 400+ American college students about how they go about doing research in their college libraries. The 150+ page report gives extensive data on student use of major search engines, wikipedia, library databases, book collections and other library resources. The study also gives detailed information on how their professors advise them to use the library, and how comfortable they feel about their research skills and how helpful librarians have been in helping them in their research. Data is broken out by more than 16 criteria including gender, income level, type and size of college, mean SAT acceptance score of the college, and many other variables. Just a few of the report’s many findings are that: ¨Only about 47% of students are sure that they have ever been required to turn in a research paper exceeding 10 double spaced typed pages in length for any of their classes.¨More than 86% of students say that they understand the concept of plagiarism | § well | or | § very well | . ¨64% of students sampled say that they know how to contact a librarian online.¨55.2% of the students in the sample had not asked for help from a librarian within the past year.¨Nearly 29% of students say that Google, Yahoo and other major search engine searches were the most important information source for their last research assignment.¨More than 9% of information needed for research papers was sourced from Wikipedia or other wickis.¨The higher the grade point average the less information for research papers was obtained from search engines such as Google or Yahoo.The study is available directly from Primary Research Group or from major book distributors. The price is \$80.00 for print and PDF versions; site licenses are also available. For further information contact Primary Research Group at 212-736-2316 or visit our website at www.PrimaryResearch.com.

You’re sitting at your desk in a classroom or in an airless cubicle, wondering how many minutes are left in a seemingly endless day, when suddenly your teacher or supervisor lowers the boom: She wants a research paper, complete with footnotes and a list of sources. She wants accuracy, originality, and good grammar. And – gasp! – she wants ten pages! You may be 16 years old or 60 years old, but your reaction is the same: Help! Take heart. A research paper may seem daunting, but it’s a far-from-impossible project to accomplish. Turning research into writing is actually quite easy, as long as you follow a few proven techniques. And that’s where Research Papers For Dummies steps in to help. In this easy-to-understand guide, you find out how to search for information using both traditional printed sources and the electronic treasure troves of the Internet. You also discover how to take all those bits of information, discarding the irrelevant ones, and put them into a form that illustrates your point with clarity and originality. Here’s just a sampling of the topics you’ll find in Research Papers For Dummies: Types of research papers, from business reports to dissertations The basic ingredients of a paper: Introduction, body, conclusion, footnotes, and bibliography Note-taking methods while doing research Avoiding plagiarism and other research paper pitfalls Defining your thesis statement and choosing a structure for your paper Supporting your argument and drawing an insightful conclusion Revising and polishing your prose Top Ten lists on the best ways to begin your research online and in print Research Papers For Dummies also includes an appendix that’s full of research paper ideas if you’re stuck. If you’re tasked with writing a research paper, chances are you already have a lot of demands on your time. You don’t need another huge pile of papers to read. This book can actually save you time in the long run, because it gives you the easiest, fastest, and most successful methods for completing your paper.

Communication research is evolving and changing in a world of online journals, open-access, and new ways of obtaining data and conducting experiments via the Internet. Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A-to-Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online multi-media environments. Email, texting, cellphone video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership and security, privacy, and other aspects of conducting an ethical research program. Features: 652 signed entries are contained in an authoritative work spanning four volumes available in choice of electronic or print formats. Although organized A-to-Z, front matter includes a Reader’s Guide grouping entries thematically to help students interested in a specific aspect of communication research to more easily locate directly related entries. Back matter includes a Chronology of the development of the field of communication research; a Resource Guide to classic books, journals, and associations; a Glossary introducing the terminology of the field; and a detailed Index. Entries conclude with References/Further Readings and Cross-References to related entries to guide students further in their research journeys. The Index, Reader’s Guide themes, and Cross-References combine to provide robust search-and-browse in the e-version.

Nancy Vyhmeister’s Quality Research Papers is fast becoming a standard reference textbook for writing research papers in the field of religion and theology. It takes the student from the beginning assignment of a paper through the research phase to the finished paper. This second edition gives improvements and added material for such things as the expanding field of online research and doing church-related research in a professional manner. Resources for doing research are updated throughout the book.

Research Paper (undergraduate) from the year 2018 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1.7, University of Mannheim, language: English, abstract: This paper examines the academic research that has been published during the past 20 years concerning search engine marketing. It classifies the most prominent papers and establishes a conceptual framework consisting of three broad areas and 20 different research themes. This is the first literature review of search-engine-related research, proposing a comprehensive conceptual framework. The purpose of this study is to conceptualize past research on search engines, develop a framework of topic areas and their relationships among each other, and identify research gaps and questions for future research. The literature review covers all academic research papers from five acclaimed journals of the past 20 years that match predefined keywords and deal with search engines as parameters in modern-day marketing. This literature review of search engine research is the first of its kind, creating a framework of research fields exclusively for online search. Furthermore, it presents the related academic work in an interdependent structure of topics and suggests future research fields.
