Develop equity, excellence, and wellbeing across the whole system! Our world needs a transformation to survive. We need a moral imperative and a system transformation to survive for the better. The Devil is in the Details shows how we can re-think the education system and its three levels of leadership—local, middle, and top—so that each level can contribute to dramatic transformation whether individually or collectively. The focus is on examining details to ensure correct actions are taken, rather than assuming large pronouncements will drive change. Readers will find: Detailed cases and analyses of successful systems Ideas for how leaders at all levels can take steps to begin Actions and strategies for addressing equity, excellence and wellbeing

Organizations are looking for ways to get more out of their already strained IT infrastructure as they face new technological and economic pressures. They are also trying to satisfy a broad set of users (internal and external to the enterprise) who demand improvements in their quality of service (QoS), regardless of increases in the number of users and applications. Cloud computing offers attractive opportunities to reduce costs, accelerate development, and increase the flexibility of the IT infrastructure, applications, and services. Infrastructure as a service (IaaS) is the typical starting point for most organizations when moving to a cloud-computing environment. IaaS can be used for the delivery of resources such as compute, storage, and network services through a self-service portal. With IaaS, IT services are delivered as a subscription service, eliminating up-front costs and driving down ongoing support costs. Businesses can improve their competitive position by moving to these cloud-based technologies. This IBM® Redpaper™ discusses IBM solutions for managed service providers (MSPs). This paper is for IT professionals who are involved in managed and cloud services solution planning.

This book gathers papers from the 23rd International Forum on Advanced Microsystems for Automotive Applications (AMAA 2020) held online from Berlin, Germany, on May 26-27, 2020. Focusing on intelligent system solutions for auto mobility and beyond, it discusses in detail innovations and technologies enabling electrification, automation and diversification, as well as strategies for a better integration of vehicles into the networks of traffic, data and power. Further, the book addresses other relevant topics, including the role of human factors and safety issues in automated driving, solutions for shared mobility, as well as automated bus transport in rural areas. Implications of current circumstances, such as those generated by climate change, on the future development of auto mobility, are also analysed, providing researchers, practitioners and policy makers with an authoritative snapshot of the state-of-the-art, and a source of inspiration for future developments and collaborations.

"This is what we know, and we know it better than anyone else." —from the introduction by Vivian Nixon and Daryl V. Atkinson A thoughtful and surprising cornucopia of ideas for improving America's criminal justice system, from those most impacted by it When The New Press, the Center for American Progress, and the Formerly Incarcerated and Convicted Peoples and Family Movement issued a call for innovative reform ideas, over three hundred currently and formerly incarcerated individuals responded. What We Know collects two dozen of their best suggestions, each of which proposes a policy solution derived from their own lived experience. Ideas run the gamut: A man serving time in Indiana argues for a Prison Labor Standards Act, calling for us to reject prison slavery. A Nebraska man who served a federal prison term for white-collar crimes suggests offering courses in entrepreneurship as a way to break down barriers to employment for people returning from incarceration. A woman serving a life sentence in Georgia spells out a system of earned privileges that could increase safety and decrease stress inside prison. And a man serving a twenty-five-year term for a crime he committed at age fifteen advocates powerfully for eliminating existing financial incentives to charge youths as adults. With contributors including nationally known formerly incarcerated leaders in justice reform, twenty-three justice-involved individuals add a perspective that is too often left out of national reform conversations.

This IBM Redbooks publication is a companion to IBM System Storage Business Continuity: Part 1 Planning Guide, SG24-6547 . We assume that the reader of this book has understood the concepts of Business Continuity planning described in that book. In this book we explore IBM System Storage solutions for Business Continuity, within the three segments of Continuous Availability, Rapid Recovery, and Backup and Restore. We position these solutions within the Business Continuity tiers. We describe, in general, the solutions available in each segment, then present some more detail on many of the products. In each case, the reader is pointed to sources of more information.

This book discusses the plight of individuals with low or marginal intelligence who become involved in the criminal justice system. They appear no different than anyone else but they are much different – more prone to being exploited and frequently manipulated to engage in uncharacteristic, illicit acts without fully understanding the implications. Their better judgment is overshadowed by their need to be accepted as normal and achieve a sense of belonging. These individuals are usually the first to be stopped and questioned by police and they are often arrested simply for being in the wrong place (or with the wrong people) at the wrong time. Without their disability recognized, police treat them as anyone else, not affording them special protections and accommodations as guaranteed by law. They often self-incriminate when being interrogated, or worse, confess to a crime they haven't even committed. And they do this without truly understanding their legal rights. The criminal justice system has been ill-prepared to handle the sudden inundation of challenging cases. These defendants are lost in a system they don't understand and one that certainly does not understand them, which partially explains the high conviction rate and frequent travesties of justice. The book discusses these problems but more importantly, it provides readers alternative solutions, diversion strategies that can be enacted at every point of encounter, preventing entry or further penetration into the "system". Building on years of firsthand experience, the author provides a useful guide for others working in the field, using many case illustrations, and specific steps to help communities develop a jail diversion program that is right for them.
