The Berkeley Method was okay. a solid 3 stars. a little too fluff romance at times, and the mystery and the stalker scenario were a bit over the top in places, and there were places in the story, especially in the beginning, where scenes were thrown in that just did not make any sense to me.

2. Berkeley's critique of materialism in the Principles and Dialogues. In his two great works of metaphysics, Berkeley defends idealism by attacking the materialist alternative. What exactly is the doctrine that he's attacking? Readers should first note that "materialism" is here used to mean "the doctrine that material things exist".

"The central aim of The Parmenidean Ascent is to reveal the power of an extreme monism of a Parmenidean variety in a more uncompromising manner than has been attempted for many a year. For the Parmenidean monist, there are no distinctions whatsoever, and indeed distinctions are unintelligible. The book not only defends-against the tide of much recent scholarship-the attribution of such a sweeping monism to Parmenides, it also embraces this monism in its own right and expands these monistic results to many of the most crucial areas of philosophy. The topics that come in for this rationalistic, monistic, treatment include being, action, knowledge, meaning, truth, and metaphysical explanation. There is thus no differentiated being, no differentiated action, knowledge, etc. Rather all is being, just as all is action, knowledge, etc. The motive force behind this argument is a combination of a detailed survey of the failures of leading positions (both historical and contemporary) to meet a demand for the explanation of a given phenomenon, and a powerful rationalist, Bradleyan argument against the reality of relations. The result is a rationalist rejection of all distinctions and a skeptical denial of the intelligibility of ordinary, relational notions of being, action, knowledge, etc. A further significant upshot is the rejection of any distinction between philosophy itself and the study of its history. Throughout the book, attention is paid to philosophical methods systems, including especially the method, so popular today, of relying on intuitions and common sense. The historically-minded and rationalist approach throughout this book goes a long way toward demonstrating the ultimate bankruptcy of this prevalent methodology"--

Transhumanists would have humanity's creation of posthumanity be our governing aim. Susan B. Levin challenges their overarching commitments regarding the mind, brain, ethics, liberal democracy, knowledge, and reality. Her critique unmaskes their notion of humanity's self-transcendence via science and technology as pure, albeit seductive, fantasy.

This lively and engaging book explains the things you have to know in order to read empirical papers in the social and health sciences, as well as the techniques you need to build statistical models of your own. The discussion in the book is organized around published studies, as are many of the exercises. Relevant journal articles are reprinted at the back of the book. Freedman makes a thorough appraisal of the statistical methods in these papers and in a variety of other examples. He illustrates the principles of modelling, and the pitfalls. The discussion shows you how to think about the critical issues - including the connection (or lack of it) between the statistical models and the real phenomena. The book is written for advanced undergraduates and beginning graduate students in statistics, as well as students and professionals in the social and health sciences.
