Ingrid Yung's life is full of firsts. A first-generation Chinese American, the first lawyer in her family, she's about to collect the holy grail of "firsts" and become the first minority woman to make partner at the venerable old Wall Street law firm Parsons Valentine & Hunt. Ingrid has perfected the art of "passing" and seamlessly blends into the old-boy corporate culture. She gamely banter in the corporate cafeteria, plays in the firm softball league, and earnestly racks up her billable hours. But when an offensive incident at the summer outing threatens the firm's reputation, Ingrid's outsider status is suddenly thrown into sharp relief. Scrambling to do damage control, Parsons Valentine announces a new Diversity and Inclusion Initiative, commanding Ingrid to spearhead the effort. Only she's about to close an enormous transaction that was to be her final step in securing partnership. For the first time, Ingrid must question her place in the firm. Pitted against her colleagues, including her golden-boy boyfriend, Ingrid begins to wonder whether the prestige of partnership is worth breaching her ethics. But in *The Partner Track* by Helen Wan, can Ingrid risk throwing away the American dream that is finally within her reach?

This book provides glimpses into contemporary research in information systems & technology, learning, artificial intelligence (AI), machine learning, and security and how it applies to the real world, but the ideas presented also span the domains of telehealth, computer vision, the role and use of mobile devices, brain-computer interfaces, virtual reality, language and image processing and big data analytics and applications. Great research arises from asking pertinent research questions. This book reveals some of the authors' "beautiful questions" and how they develop the subsequent "what if" and "how" questions, offering readers food for thought and whetting their appetite for further research by the same authors.

New York Times bestselling author Lisa Kleypas delivers the unforgettable, sexy tale of a brash rogue who meets his equal in a woman who knows exactly what she wants . . . Zachary Bronson has built an empire of wealth and power. Now he is seeking a wife to help secure his position in the ton . . . as well as warm his bed in private. But not just any woman will do for one of London's most notorious rakes. When he meets Lady Holly Taylor, he surrenders to the temptation to take her in his arms and kiss her. Yet he's pleasantly surprised to discover her fierce passions match his own. Lady Holly Taylor is destined to spend her life playing by society's rules even when they go against her bolder instincts. But Zachary's kiss arouses her, and though his shocking offer doesn't include marriage, she is compelled to risk everything for the most forbidden passion.

Dual specificity phosphatases (DUSPs) constitute a heterogeneous group of protein tyrosine phosphatases with the ability to dephosphorylate Ser/Thr and Tyr residues from proteins, as well as from other non-proteinaceous substrates including signaling lipids. DUSPs include, among others, MAP kinase (MAPK) phosphatases (MKPs) and small-size atypical DUSPs. MKPs are enzymes specialized in regulating the activity and subcellular location of MAPKs, whereas the function of small-size atypical DUSPs seems to be more diverse. DUSPs have emerged as key players in the regulation of cell growth, differentiation, stress response, and apoptosis. DUSPs regulate essential physiological processes, including immunity, neurobiology and metabolic homeostasis, and have been implicated in tumorigenesis, pathological inflammation and metabolic disorders. Accordingly, alterations in the expression or function of MKPs and small-size atypical DUSPs have consequences essential to human disease, making these enzymes potential biological markers and therapeutic targets. This Special Issue covers recent advances in the molecular mechanisms and biological functions of MKPs and small-size atypical DUSPs, and their relevance in human disease.

The two-volume set LNCS 6974 and LNCS 6975 constitutes the refereed proceedings of the Fourth International Conference on Affective Computing and Intelligent Interaction, ACII 2011, held in

Memphis, TN, USA, in October 2011. The 135 papers in this two volume set presented together with 3 invited talks were carefully reviewed and selected from 196 submissions. The papers are organized in topical sections on recognition and synthesis of human affect, affect-sensitive applications, methodological issues in affective computing, affective and social robotics, affective and behavioral interfaces, relevant insights from psychology, affective databases, Evaluation and annotation tools.

The first edition of this innovative book brought a new perspective to the metabolic and therapeutic aspects of amino acids in clinical nutrition. Since its publication, a number of very important advances have been made in the field and interesting new findings have emerged. Until now, no reference has fully explored the promising new developments

The second Edition of the Handbook of Silicon Wafer Cleaning Technology is intended to provide knowledge of wet, plasma, and other surface conditioning techniques used to manufacture integrated circuits. The integration of the clean processes into the device manufacturing flow will be presented with respect to other manufacturing steps such as thermal, implant, etching, and photolithography processes. The Handbook discusses both wet and plasma-based cleaning technologies that are used for removing contamination, particles, residue, and photoresist from wafer surfaces. Both the process and the equipment are covered. A review of the current cleaning technologies is included. Also, advanced cleaning technologies that are under investigation for next generation processing are covered; including supercritical fluid, laser, and cryoaerosol cleaning techniques. Additionally theoretical aspects of the cleaning technologies and how these processes affect the wafer is discussed such as device damage and surface roughening will be discussed. The analysis of the wafers surface is outlined. A discussion of the new materials and the changes required for the surface conditioning process used for manufacturing is also included. Focused on silicon wafer cleaning techniques including wet, plasma, and other surface conditioning techniques used to manufacture integrated circuits As this book covers the major technologies for removing contaminants, it is a reliable reference for anyone that manufactures integrated circuits, or supplies the semiconductor and microelectronics industries Covers processes and equipment, as well as new materials and changes required for the surface conditioning process Editors are two of the top names in the field and are both extensively published Discusses next generation processing techniques including supercritical fluid, laser, and cryoaerosol
