BONTEXGEO - High Quality nonwoven & woven geosynthetics

Although non-woven geotextile has a lower tensile strength than the woven type, it still offers great strength, durability and excellent drainage properties. Non-woven geotextile is a felt-like fabric made by thermally bonding polypropylene or a mixture of polypropylene and polyester fibres and then finishing using needle punching, calendaring and other methods.

- Nonwoven fabrics are actually not fabrics as they have no internal structure as such.
- Felting and bonding are used to create nonwoven fabrics, whereas weaving requires warp and weft threads to create an interlaced pattern like the weaving in baskets.
- Woven fabrics are much stronger than nonwoven fabrics.
- Nonwoven fabrics are mostly used for interlining or to make hats or other handicrafts.

staple fibre and long fibres, bonded together by chemical, mechanical, heat or solvent treatment. The term is used in the textile manufacturing industry to denote fabrics, such as felt, which are neither woven nor knitted. Some non-woven materials lack sufficient strength unless densified or reinforced by a backing. In recent years, non-wovens have become an alternative to polyurethane foam.

Nonwoven fabric - Wikipedia

The Non Woven Federation of India (NWFII), representing the regional associations of spunbond nonwoven fabric manufacturers, aims to emerge as the voice of this segment of technical textiles. As the
